

Specops Inventory

Inventory collects and reports information on hardware, software, registry, user settings, operating system, security data, and Active Directory data. The tool can help with your license compliance needs, saving you time and money. It scales with any size of Active Directory, and can be up and running in under 60 minutes.

The screenshot shows the 'Specops Configuration' application window. The title bar reads 'Specops Configuration'. The main header area contains the 'SPECOPS:CONFIGURATION' logo. Below the header, there are three navigation tabs: 'Welcome', 'Specops Deploy / App', and 'Specops Inventory', with the latter being the active tab. The interface is divided into several sections:

- Computers:** A sidebar menu with 'Computers' and 'License' options.
- Search and Filters:** Fields for 'Number of days of inactivity', 'Computer name', and 'Client version' (set to '(Any)') with a 'Search' button.
- Table:** A table with columns 'Computer', 'Version', and 'Last Activity'. It lists three entries: CLIENT-001 (highlighted), CLIENT-002, and CLIENT-001.
- Actions:** A box containing 'Delete Selected Computer Records' and 'Export Computer List to File'.
- Footer:** Shows 'Current Server: srv2.robort.local' with a 'Change' link and the date '7/22/2015'. It also indicates 'Displaying 3 computers'.

Computer	Version	Last Activity
CLIENT-001		9/18/2018 1:10:36 AM
CLIENT-002		10/2/2018 6:37:52 PM
CLIENT-001		10/2/2018 7:05:54 PM
